Remote, hybrid or on-site in Guadalajara, CDMX or Monterrey · Available in 2 weeks

PROFILE

DevOps and SRE engineer with 14 years of experience across private and public clouds: more than 7 years on AWS since 2019, and more than 6 years operating VMware private clouds (2012–2019). I automate infrastructure with Terraform, Ansible and Kubernetes, with experience in disaster recovery, capacity planning and on-call operations.

CORE SKILLS

Cloud: AWS (EC2, RDS, VPC, IAM, S3, Cognito); Oracle Cloud Infrastructure (OCI); GCP
Infrastructure as code: Terraform, Terragrunt, Ansible, Packer, Helm; CloudFormation (basic)
Containers: Docker, Kubernetes (EKS, NKP/DKP)
CI/CD: Jenkins, GitLab CI, GitHub Actions, Buildkite, Harness; GitOps
Observability: OpenTelemetry, Prometheus, Grafana, Datadog, Splunk, PagerDuty
Security and IAM: OAuth, Okta integrations for authentication and access control
Databases: Oracle (10 to 13, RAC, Exadata), PostgreSQL, MongoDB, MySQL / Aurora
Systems: Linux (RHEL, Oracle Linux), AIX, VMware, Nutanix, NetApp ONTAP, Bash, PL/SQL, Python (scripting)
Languages: Spanish (native); English (advanced, C1)

EXPERIENCE

Senior Automation Engineer — Petco (Aug 2025 – Sep 2026)

Decommissioned unused Unix/Linux virtual machines on Nutanix; automated server provisioning and standardized machine images across GCP and AWS.
Administered and automated enterprise Unix/Linux infrastructure with Ansible, OLAM and Terraform; code kept in GitLab.
Managed UC4/AppWorx schedulers so production jobs and databases were unaffected during patch cycles.
Operated Kubernetes clusters on NKP and DKP.
Resolved critical incidents (CPU, memory, disk) with Datadog, Grafana and PagerDuty.
Used OpenTelemetry as a telemetry source feeding Prometheus, Grafana, Datadog and Splunk.
Worked with Okta integrations using OAuth for authentication and IAM security.
Practiced GitOps: pull requests, code review and promotion of changes between environments.
Coordinated DNS changes, RADIUS certifications and compliance updates across hundreds of production and non-production hosts.

DevOps Engineer — SAP (Oct 2024 – Jul 2025)

Significantly reduced MTTR (mean time to recovery) in the assigned operations.
Built automated network device discovery, giving full infrastructure visibility and broader monitoring coverage.
Automated NetApp ONTAP upgrades to keep environments consistent.
Designed and implemented CI/CD pipelines aligned with Scrum, with validation, error handling and monitoring.
Moved automation frameworks to a centralized platform for global operations.

Cloud Engineering Lead Engineer — FICO (May 2023 – May 2024)

Migrated more than 45 Jenkins jobs to pipelines, cutting build times by 25% and enabling multi-cloud deployments.
Defined AWS security standards with the security team; guided product teams through secure migrations.
Owned the DevOps toolchain (Jenkins, Docker, AWS EC2/SQS/IAM) with 100% audit compliance.
Handled more than 150 tickets a day; introduced an aging report that cut average resolution time from 48 to 24 hours.

DevOps / RDS Specialist — BlackLine (Nov 2022 – May 2023)

Tuned Amazon Aurora MySQL parameter groups: analyzed static parameters on the main database and built groups for each phase (indexes, parser hints, forced execution plans): +20% query performance and –15% CPU usage in production.
Set up the initial CloudWatch alarms for cloud metrics in AWS, leading to KPIs for the service.
Automated RDS provisioning with Terraform: environment setup from 2 hours to 10 minutes.

SRE / DevSecOps Engineer — Zoolatech, client Campspot (Mar – Jul 2022)

Built CI/CD pipelines with Buildkite and Harness, moving release frequency from bi-weekly to weekly.
Built Terragrunt modules for automated ECR repository creation: 90% less manual effort.
Configured CloudWatch alarms and EventBridge rules: 40% fewer undetected incidents.

DevOps Engineer — ITJuana, client Dexcom (Nov 2021 – Feb 2022)

Integrated Ansible playbooks into a GitHub-based CI flow with pull-request deployments: provisioning from 2 hours to 15 minutes.
Built Datadog dashboards with PagerDuty integration for on-call alerting.
Administered Google Cloud Platform resources for development and production.

Associate Consultant — Tata Consultancy Services (Oct – Nov 2021)

Administered Oracle databases and provided operational support in a regulated environment with several teams.
Automated routine DBA tasks with shell and Python; handled incident triage and change management under ITIL.

Oracle Corporation — Principal Database Administrator, Oracle Cloud Infrastructure (OCI) (May 2020 – Jun 2021)

First formal experience with a public cloud (OCI).
Administered Oracle Exadata and RAC 19c/12c databases on Oracle Cloud Infrastructure.
Built high availability and recovery with Data Guard, ASM and RMAN; automated provisioning, patching and health checks with shell and Python.

Nextiva (formerly Contrata) — SecDevOps / Senior Database Administrator (Jun 2019 – May 2020)

First AWS work from June 2019. Migrated databases to AWS during the pandemic shift to remote work: VPCs, network interfaces, security groups and firewall rules for communication between databases and public services; access to S3 buckets; authentication with Amazon Cognito.
Ran databases on AWS under BYOL (Bring Your Own License) on EC2 and others on Amazon RDS.
Administered PostgreSQL, Oracle and MongoDB in production and non-production; automated database installation and configuration.
Prepared audit controls for databases and infrastructure ahead of the company's IPO; produced disaster recovery test evidence for compliance reviews.

Sr. Oracle Database Administrator — HCL Technologies, client USAA (banking, United States) (Feb 2017 – Jun 2019)

Operated Oracle 10 to 13 databases (including RAC) in a private cloud: VMware virtualization and internal self-service provisioning; Oracle RAC on bare metal for large workloads.
Ran 8 disaster recovery exercises per year: planning, switchover and recovery validation.
Covered weekly on-call rotations, reviewing more than 100 incidents daily, with follow-the-sun handover to teams in India; trained the Mexico team on new deployments.
Quarterly deployments. Automated tasks with shell (ssh) scripts and PL/SQL routines; limited exposure to Ansible.
Upgraded Oracle Enterprise Manager from 12c to 13c for centralized monitoring; maintained Data Guard standby databases and performed RAC rolling patches with minimal downtime.

Database Administrator / Technical Leader — T-Systems, Puebla (Oct 2012 – Nov 2016)

Member of the team that ran a VMware private cloud across three geographically separate data centers in Puebla: access requests and storage provisioning, new servers, connections, switches and routes.
Technical lead for Oracle and DB2 databases; responsible for installing, operating, administering and optimizing cloud database environments, mentoring the team on new technologies (including Hadoop) and hiring candidates in the US and Mexico.
Managed approximately USD 1.2 million a year in DBA services for global enterprise clients (accounting applications, market data, equities and fixed income, healthcare).
Technical lead or project lead on more than 80 medium and large implementations.
Designed the storage strategy and disaster recovery plan for a manufacturing company's operational database, with 99.95% availability.
Migrated database environments between data centers, tuning parameters for new hardware.
Administered databases larger than 10 TB in a critical production environment on Linux.

EDUCATION

Ingeniero en Sistemas Computacionales (Computer Systems Engineering) — Universidad Autónoma de Ciudad Juárez (UACJ)

CERTIFICATIONS

AWS Cloud Practitioner Essentials — course (Nov 2022); AWS training event (Apr 2023)
NetApp ONTAP Data Protection Administration — NetApp (Dec 2024)
NetApp ONTAP Cluster Administration — NetApp (Dec 2024)
Oracle Database 11g: Performance Tuning — Oracle University course (Aug 2014)
ITIL® Foundation Certificate in IT Service Management — PeopleCert (Apr 2015)
Certified Kubernetes Administrator (CKA) Cert Prep — LinkedIn Learning course (Nov 2021); not the CKA exam
DevOps Foundations — LinkedIn Learning (Nov 2021)
Learning Kubernetes — LinkedIn Learning (Nov 2021)
AWS for DevOps: Continuous Delivery and Process Automation — LinkedIn Learning (Oct 2021)
